## Education

### Agile web developer
Since February 2023 Project CodeX Cape Town, South Africa
Projects done at Project codeX

- Theme park booking app (Hackathon Group project)
  https://github.com/Saffah1910/theme-park-booking-app
  As a team, we developed an application that enables park visitors to seamlessly book ride and meal packages. Upon booking, users receive a personalised QR code containing specific points corresponding to their chosen package. This innovative system eliminates the need for visitors to wait in lengthy queues for tickets; instead, they can effortlessly scan their code at the designated points of entry, with points deducted accordingly. Park staff also possess the capability to scan visitors' QR codes, facilitating the retrieval or deduction of points for each user.
- The Waiter Scheduling Web App simplifies and enhances the process of managing staff schedules for restaurants and eateries.
  - **User-Friendly:** Access, https://waiter-webapp-rzqm.onrender.com/days add <code>/waiters/yourName</code> to schedule working days.
  - **Database Integration:** Securely stores waiter data.
  - **Admin Page:** Visit https://waiter-webapp-rzqm.onrender.com/days to see waiter schedules.

  Key Features:
  - **Efficient Scheduling:** Waiters input availability for accurate schedules.
  - **Database Storage:** Safely stores information.
  - **User-Specific Profiles:** Append name to the URL for a personalized profile.
  - **Comprehensive Admin Page:** Owners view schedules for effective staff management.

### National Senior Certificate
From 2019 to 2021 Islamia College Cape Town

### Primary School
